Class

Course Name: Lock Out / Tag Out Safety

Duration: 45 Minutes

Video Included: Yes

Instructor: TBD

Course Description: The purpose of this class is to show the importance of the Lock – out / Tag - out system to prevent injury.

Lock-out / Tag-out is a safety procedure which is used in industry to ensure that dangerous machines and / or equipment are properly shut off and unable to be restarted again prior to the completion of maintenance or repair work. It requires that the hazardous energy sources be isolated and rendered inoperative before repairs are initiated on the locked out equipment. The objective is to prevent accidental startup of a machine or piece of equipment while it is in a state of disrepair.

The procedures for Lock-out / Tag-out will be discussed.
